Resume Highlights

- **Experienced Engineering Leader:** 7+ years of progressive leadership experience, managing global engineering teams (**US, Europe, India**), and driving strategic initiatives in software and systems engineering.
- **Data Engineering & Infrastructure Focus:** Proven ability to build and manage data platforms, including a **"home-grown"** big data system for log analytics and security intelligence and off the shelf **SIEM technology** migrating multiple **terabytes of data** per day. Experience with web-scale data pipelines, logging solutions, and AWS.
- **Endpoint Security & Opensource Security:** Expert in architecting **web-scale endpoint security software**, including a security control plane for **1.4 million endpoints**
- **Strong Software Engineering Background:** 10+ years of **software development** experience with a mastery of object-oriented design, design patterns, and programming skills.
- **Strategic Vision & Partnership:** History of influencing and guiding projects from ideation to production, establishing strong relationships with business and technical leaders, and contributing to engineering leadership.
- **Team Building & Mentorship:** Demonstrated success in **recruiting, coaching, and developing** high-performing engineering teams, fostering a culture of feedback and empowerment.

Skills

- **Security:** Endpoint Security EDR (**CrowdStrike, Tanium**), OpenSource Endpoint Fleet Management(**OSquery, Fleet**), SIEM (**NGSIEM, Chronicle**), Detection and Response, Cloud Security, Security Architecture, Threat Modeling, Logging Solutions, Data Loss Prevention, Zero Trust
- **Big Data Technologies:** Hadoop, Spark, Airflow, Snowflake, Iceberg (Experience with building big data system)
- **Management & Leadership:** Agile, Scrum, Cross-functional Team Leadership, Strategic Leadership, Team Building, Mentorship, Performance Management, Change Management, Business Strategy, People Management
- **Programming Languages:** Python, Bash, PowerShell
- **Cloud Technologies:** Amazon Web Services (AWS), Google Cloud Platform(GCP)
- **Infrastructure & Automation:** Terraform, Ansible, CI/CD (Jenkins, Spinnaker), Packer, Docker, Kubernetes
- **Tools & Systems:** EDW, SQL, BI Tools, Microsoft Exchange, VMware ESX, SCOM, Mobile Device Management Solutions (AirWatch, MobileIron)

Professional Work Experience

Salesforce, San Francisco, California
Director Software Engineering

Apr 2023 - Current

- Lead the **Salesforce SIEM platform** within the CSOC Engineering team, overseeing the ingestion and management of multiple **terabytes of data per day** across various business units. Enable CSOC to maintain critical **MTTD and MTTR SLAs** through 24/7 operational support while driving initiatives to improve **data quality** and reduce Signal-to-Noise Ratio (SNR).
- Managed the **Salesforce enterprise email security** infrastructure and **security control plane endpoint solutions**, including the implementation and centralization of custom security controls for **1.4 million endpoints**.
- Architected a **home-grown data platform** for security health reporting and **autonomous remediation metrics**, delivering critical telemetry to enable **predictive security operations**.

Salesforce, Remote, Pennsylvania

Apr 2022 – May 2023

Senior Manager Systems Engineering

- Provided strategic leadership to global engineering teams across three locations (US, Europe, and India).
- Orchestrated the successful migration of security software for over 1 million endpoints across 41 business units, ensuring seamless transitions during complex mergers and acquisitions.
- Directed a cross-functional **Agile** team using Scrum to deliver high-impact projects ahead of schedule, achieving a 20% increase in productivity.
- Optimized operational efficiency by implementing custom automation, resulting in an 80% reduction in operational ticket volume.
- Maintained hands-on technical engagement through code development, architectural contributions, and comprehensive code reviews for core projects.
- Designed a **Change Management & Change Safety** framework to standardize and secure large-scale endpoint software deployments.

Comcast Cable Corp Philadelphia, Pennsylvania

Apr 2021 – May 2022

Manager Security Development & Engineering

- Direct global engineering teams across two geographical sites, spearheading **endpoint security software development** and engineering lifecycle management.
- Serve as the **Open Source Project Lead** for the internal development team, driving feature releases, customer success initiatives, and operational excellence for core software solutions.
- Actively contribute to the **Open Source community** and represent the organization as a featured speaker at local security guilds.
- Recognized with the **Circle of Innovation Leadership Award** at Comcast for outstanding contributions to engineering and strategic growth.

Comcast Cable Corp Philadelphia, Pennsylvania

Feb 2016 – Apr 2021

Senior Cyber Security Engineer (Team Leader)

- Served as the **Architect** for the design and deployment of **endpoint security software** at Comcast, spearheading ground-up development and directing operational lifecycles for the internal engineering team.
- Architected a **"home-grown" big data system** to facilitate advanced **log analytics** and security intelligence visualization for Comcast global security operations.
- Acted as the **Team Lead** for **open-source cybersecurity** initiatives, enhancing endpoint visibility across Linux and Windows environments with a strategic focus on **Zero Trust** architectures.
- Orchestrated **cross-functional business engagements** with security and engineering stakeholders to define complex use-cases and drive end-to-end development lifecycles.
- Directed the **Comcast Enterprise Logging Solution**, managing global teams of part-time and full-time engineers to deliver critical security dashboards and streamlined log onboarding for organizational stakeholders.
- Spearheaded **Security DevOps/SecOps** for the AWS initiative, utilizing **Ansible**, **Packer**, and Lambda to automate security standards and secure the **CI/CD pipeline** via static code analysis.
- Partnered with **Security Architecture**, Threat Modeling, and **Penetration Testing** teams to achieve organizational security compliance and official project validation.

Comcast Cable Corp Philadelphia, Pennsylvania

May 2013 - Feb 2016

Cyber Security Engineer

- Executed **email security investigations** and forensics utilizing **IronPort**, **Symantec**, and **FireEye** malware analysis appliances to secure the messaging infrastructure.
- Deployed **Targeted Attack Protection** to defend Comcast service users against **Advanced Persistent Threats (APT)**.
- Managed **Mobile Device Management (MDM)** enterprise evaluations and SDLC for **AirWatch**, **Zenprise**, **Good**, and **MobileIron**, including staging deployment, functional validation, and end-user training.
- Architected **Mobile Device Security** frameworks encompassing **MAM**, **MDM**, and **Mobile VPN** solutions to protect corporate applications and data.
- Spearheaded the **Comcast BYOD Program** implementation, designing the architecture utilizing **AirWatch Workspace**.

**Unbounded Solutions for
Comcast Cable Corp Philadelphia, Pennsylvania**

April 2012 - May 2013

Messaging Security Engineer

- Conducted comprehensive **Cloud Security MSP** evaluations and Proof of Concept (POC) for **Proofpoint** and **Symantec** solutions, driving system design and analysis for Comcast and NBC Universal.
- Defined and enforced **architectural standards**, including **PCI** and **SOX**, to ensure organizational security compliance and project validation.
- Managed internal and hybrid **cloud security models** for Comcast, overseeing high-volume messaging traffic to secure the enterprise perimeter.
- Integrated **Symantec Data Loss Prevention (DLP)** with the Comcast messaging gateway, directing the maintenance of critical DLP policies and rules.
- Authored comprehensive technical **documentation** for Comcast security policies and architectural designs.

Unbounded Solutions Atlanta, Georgia

January 2012 – April 2012

Microsoft Exchange Consultant

- Architected and deployed **Exchange 2010 Enterprise Servers** for the Enterprise Messaging division, overseeing full-scale infrastructure implementation.
- Orchestrated the end-to-end project lifecycle, including initial **discovery**, **assessment**, **POC**, and production deployment based on complex design plans.
- Configured critical **TMG Gateway Servers**, distributed applications, and **message hygiene solutions** to secure organizational communications.
- Designed a scalable infrastructure supporting **700+ Windows servers** and over **15,000 Exchange mailboxes**.
- Developed **PowerShell scripts** to automate the migration of thousands of user accounts and mailboxes, enhancing operational efficiency.
- Leveraged **custom scripting** and EMC to complete complex tasks autonomously without the use of third-party tools.
- Virtualized development, QA, and production environments via **VMware ESX** and utilized Active Directory Migration Tool for cross-forest phase execution.
- Authored comprehensive technical **documentation** covering all project phases from Discovery and Assessment to Design and Proof of Concept.
- Directed the migration and upgrade of **SCOM 2007** and SCOM Management systems to optimize infrastructure monitoring.

Education

Colorado Technical University

August 2010 - December 2011

MS Electrical Engineering (Electronics & Communications)

University of Engineering and Technology

September 2005 - July 2009

BS Electrical Engineering (Electronics & Communications)
